TOBACCO SITUATION

W. R. MANN
LIBRARY

APR 4 1968

23

MARCH 1968

In 1967, U.S. cigarette output was 576 billion. This was 1.6 percent above 1966 and higher than in any previous year. About 72 1/2 percent of 1967 production consisted of filter tip cigarettes--up from 68 percent in 1966. The 100 millimeter filter tip cigarettes made up nearly 10 percent of 1967 output, compared with an estimated 2 percent in 1966.

SUMMARY

Growers intend to plant 11 percent fewer acres of flue-cured tobacco--the leading kind--than last year. The 1968 decrease reflects in part downward adjustments (under the acreage-poundage program) for flue-cured tobacco farms that overmarketed in 1967. In 1967, marketing quotas and matching acreage allotments for many flue-cured farms had been increased because of undermarketings in the previous year.

Production of flue-cured tobacco in 1968 may be about 15 percent below 1967--based on intended acreage and an average yield per acre (adjusted for trend as modified by the restraints of poundage quotas). Although the mid-1968 carryover may be 1 to 2 percent above a year earlier, the expected reduction in 1968 crop marketings

would result in a total 1968/69 supply about 4 percent smaller than in 1967/68.

A public hearing on a proposed Federal marketing order for flue-cured tobacco (to regulate its movements from farms to warehouse) was held at 6 locations in the major producing states during February 26-March 8. The U.S. Department of Agriculture is analyzing the record of this hearing.

The 1968 acreage of burley--ranking second in volume--is indicated to be about the same as last year. In a recent referendum, an overwhelming majority (97 percent) of burley growers voting approved continuation of marketing quotas (on an acreage allotment basis) for their 1968, 1969, and 1970 crops.

Allowing for trend in average yields, the intended acreage of burley tobacco would provide a 1968 crop 9 percent above last year's marketings, which were the smallest in 7 years. Per acre yields in 1967 averaged well below the previous year's record. Carryover into 1968/69 is likely to be down about 5 percent. This, together with the indicated production, would provide a total 1968/69 supply 1 percent below 1967/68,

Intended acreage of Maryland tobacco is indicated to be about the same as last year's. Acreage allotments do not apply to the 1968 crop, since less than the required two-thirds majority voted in favor of marketing quotas and acreage allotments in a recent referendum.

Intended acreages of fire-cured and dark air-cured tobacco as of March 1 were down 2 percent and 4 percent, respectively, from last year.

Intended 1968 acreages of Pennsylvania and Ohio cigar filler are indicated to be down 5 and 9 percent, respectively, from 1967; that of Connecticut Valley cigar binder is indicated to be 1 percent larger. Intended acreage of Southern Wisconsin tobacco is unchanged from last year, but acreage of Northern Wisconsin was indicated to be down 9 percent. Intended acreage of Connecticut Valley and Georgia-Florida wrapper may be down 1 and 2 percent, respectively, from 1967.

The 1968 price support levels for eligible tobaccos are about 3 percent higher than in 1967. The increase results from a rise in the parity index (a measure of changes in prices paid by farmers, wages paid hired labor, interest, and taxes). Under the law, price support cannot be offered for the 1968 crops of Maryland and Pennsylvania tobacco, since more than one-third of the growers of each type disapproved marketing quotas in recent referendums.

In 1967, U.S. smokers consumed 549 billion cigarettes--1.5 percent more than in 1966 and more than in any previous year. However, adult per capita consumption, at 4,280 cigarettes (214 packs), was 0.2

percent below 1966 and 1½ percent under the 1963 peak. The 1967 output of filter tip cigarettes (72½ percent of the total) rose nearly 30 billion cigarettes above 1966. This more than offset a 21 billion decline in production of nonfilter tip cigarettes (27½ percent of the total).

Total U.S. cigarette consumption in 1968 may show a modest increase over 1967. An increase in the adult population and comparatively high consumer incomes will be the main contributory factors.

U.S. consumption of cigars and cigarillos in 1967 totaled 8.1 billion--down about 2½ percent from 1966 and 11 percent from the 1964 peak. Consumption still remained more than a tenth above 1963--the long-time high prior to 1964. In 1968, not much change from the 1967 level of consumption is expected.

Consumption of smoking tobacco by U.S. smokers was about 67 million pounds --3 percent below 1966. Roll-your-own cigarettes accounted for an estimated 31 percent of total smoking tobacco consumption. Use of imported smoking tobacco increased further, and made up 5½ percent of total U.S. consumption. U.S. output of chewing tobacco in 1967 totaled about 64 million pounds--1 percent below the preceding year. Snuff output, at 29.3 million pounds, was down slightly.

U.S. exports of unmanufactured tobacco in 1967 totaled 572 million pounds (equivalent to about 642 million pounds, farm-sales weight). They were the largest since 1946 and about 4 percent above 1966. Principal factors contributing to the increase were sanctions against Rhodesian tobacco, improved quality of recent flue-cured crops, and the export payment program that has strengthened the competitive position of U.S. leaf in foreign markets. In the year ending June 30, 1968, U.S. exports of unmanufactured tobacco may total around 575 million pounds (approximately 650 million, farm-sales weight). Although this would be about 8 percent below the 47-year high of 1966/67, exports would otherwise be the largest since 1955/56.

U.S. imports of aromatic cigarette leaf for consumption totaled a record 150½ million pounds in 1967--10 percent above the previous year. Cigarette leaf arrivals (direct entries plus those placed in bond), at 212 million pounds, also were at a new high. This raised U.S. stocks of foreign-grown cigarette leaf on January 1, 1968, well above those of any previous January 1.

TOBACCO PRODUCTS

Cigarettes

In 1967, U.S. smokers (including those overseas) consumed 549 billion cigarettes--1.5 percent more than in 1966 and more than in any previous year. The year-to-year percentage gain, however, was somewhat less than the percentage increase in population of smoking age. Consequently, consumption per capita 18 years and over, at 4,280 cigarettes (214 packs of 20) was slightly below the 1966 level. It was 1½ percent below the 1963 peak of 4,345 (217¼ packs). (See table 3.) Average consumption per smoker would exceed this per

capita measure, which is obtained by dividing total consumption by total population 18 years and over.

During the period 1955-63--with but one exception--the year-to-year percentage gains in total U.S. consumption of cigarettes exceeded percentage gains in the population 18 years and over. Per capita consumption during this period rose an average of about 2½ percent a year. In 1964--the year the Surgeon General's report on smoking and health was issued--both total and per capita consumption declined. Although the rise resumed in 1965 and 1966, the annual rate of increase in per capita consumption was considerably below the 1955-63 average.

Total U.S. cigarette consumption in 1968 may show a modest gain over 1967. An increase in population of smoking age, high levels of consumer income, and heavier overseas shipments will be contributing factors.

During the last 6 months of 1967, cigarette taxes were increased in 9 States, including California (which raised its tax from 3 to 10 cents a pack in 2 stages).

1/ Subject to revision. 2/ Includes Canal Zone. 3/ Includes around 100 foreign destinations in recent years.

Compiled from publications and records of the Bureau of the Census.

Pennsylvania (an increase from 8 to 13 cents), Illinois (from 7 to 9 cents), and Ohio (from 5 to 7 cents). Cigarette taxes are in effect in 49 States and the District of Columbia; North Carolina is the only State that does not have a tax on cigarettes. As of January 1968, 33 States had tax rates of 8 cents or more per pack, compared with 3 in 1960. The average rate of State cigarette taxes (weighted by number of packs taxed) was about $7\frac{1}{2}$ cents per pack in 1967. The Federal excise tax is 8 cents a pack. In addition, a considerable number of local governments tax cigarettes.

In 1967, U.S. output of cigarettes totaled about 576 billion--about 95 percent for U.S. smokers and the rest for commercial exports to over 100 countries and for shipment to Puerto Rico. About $72\frac{1}{2}$ percent of the 1967 output was filter tip and about $27\frac{1}{2}$ percent was nonfilter tip. (See table 2.)

U.S. exports of cigarettes in 1967, at nearly $23\frac{3}{4}$ billion, were a little above those in each of the 2 preceding years. (See table 4 for leading destinations.) The declared value of 1967 cigarette exports totaled \$116.2 million, up 5 percent from 1966--reflecting the 1 percent increase in export volume and a 4 percent rise in unit value. Shipments of cigarettes to Puerto Rico and other U.S. islands in 1967, at 3,882 million, were only slightly below the previous year's record level.

Cigars, Cigarillos, Small Cigars

U.S. smokers (including those overseas) consumed about 8.1 billion cigars in 1967-- $2\frac{1}{2}$ percent less than in 1966. In the past 3 years, cigar consumption receded steadily from the record 1964 level, but the rate of decline diminished each year. Despite the decline of the past 3 years, 1967 cigar consumption was over 800 million--11 percent--greater than in 1963, the high point in the 40 years prior to 1964. About 131 cigars and cigarillos were consumed per male 18 years and over. This was down about 4 percent from 1966, but was

fourth highest in over 35 years. (See table 7.) During 1968, total cigar and cigarillo consumption is expected to be near the 1967 level.

Taxable removals of cigars and cigarillos in revenue class C (retail price over 4 to 6 cents apiece) accounted for around 40 percent of the total. Taxable removals in class E (over 8 to 15 cents apiece) accounted for 32 percent. The number in each class declined about $4\frac{1}{2}$ percent below 1966. However, cigars in classes F and G--selling for over 15 cents apiece (6 percent of the total)--increased 7 percent.

U.S. cigar exports rose to a new high of 76 million in 1967--4 percent above 1966. The declared value of these exports was \$2.2 million, about the same as the year before. A decline in the average value offset the increase in volume. (An indeterminate proportion of these cigar exports were small cigars, about cigarette size, weighing not more than 3 pounds per 1,000.) Canada was the leading export outlet, more than doubling its takings. (The average unit value of exports to Canada indicates that shipments may have consisted mainly of cigarette-size cigars.) Second ranking outlet was France, which cut its takings by more than half. Countries taking more than in 1966 included Japan, the United Kingdom, Bahrein, Republic of South Africa, Portugal, Bermuda, Kuwait, Switzerland, and Greece. Those taking less included Iceland, the Bahamas, Panama, and Hong Kong.

U.S. imports of cigars totaled about 30 million in 1967, valued at \$2.7 million. Both volume and value were up approximately a sixth from 1966. Leading sources were the Philippine Republic, the Netherlands, Canary Islands, Brazil, Jamaica, and Mexico.

Taxable removals of small cigars totaled 431 million in 1967, not much different than in 1965 and 1966. Although less than half the unusual high of 1964, 1967 taxable removals were substantially above the years immediately preceding 1964.

Smoking Tobacco

The 1967 U.S. production of smoking tobacco for pipes and roll-your-own cigarettes totaled about $64\frac{3}{4}$ million pounds--4 percent less than in 1966 and 10 percent less than 2 years earlier. Output in the first half of 1967 ran 9 percent below a year earlier, but in the last half it was nearly 2 percent higher. Manufacturers' domestic sales, which in the first half of 1967 were also 9 percent below the like 1966 period, were 1 percent above a year earlier in the last half of 1967. Higher cigarette prices in States that boosted taxes may have stimulated sales of smoking tobacco during this period.

For 1967 as a whole, estimated consumption of smoking tobacco amounted to 67 million pounds--3 percent below the previous year. Estimated consumption per adult male was about 4 percent less than in 1966 and 15 percent less than 10 years ago. (See tables 7 and 8.)

The 1966 and 1967 production and manufacturers' sales of smoking tobacco by category are shown in table 9. Granulated or sack tobacco and cigarette cut tobacco are primarily used for roll-your-own cigarettes. However, some portion of "pipe" tobacco is also used for this purpose, and a small portion of the other 2 categories--consumed mainly in roll-your-owns--is probably used in pipes.

Based on factory shipments of cigarette papers (and allowing for probable wastage), the number of roll-your-own cigarettes smoked in 1967 is estimated to have been about $11\frac{3}{4}$ billion--up about $1\frac{1}{2}$ billion from 1966. An estimated 21 million pounds of smoking tobacco was used in roll-your-owns in 1967--about 31 percent of total U.S. consumption of smoking tobacco.

In 1967, imports of manufactured tobacco (most of it smoking tobacco) reached a new high of 3.7 million pounds--12 percent above a year earlier--valued at \$4.6 million. Imported smoking tobacco made up $5\frac{1}{2}$ percent of total U.S. consumption of smoking tobacco in 1967, compared with about 5 percent in 1966 and only 1 percent

in 1960. Of total 1967 imports, the Netherlands furnished 75 percent, and the United Kingdom and Denmark about 7 percent each. The major part of the 1967 increase was due to larger imports from the Netherlands and Denmark; imports from the United Kingdom gained 2 percent. The average values (per pound, excluding the 17 $\frac{1}{2}$ -cent duty) of recent imports from various sources were:

<u>Source</u>	<u>1964</u>	<u>1965</u>	<u>1966</u>	<u>1967</u>
Netherlands	\$1.11	\$1.15	\$1.17	\$1.14
United Kingdom	2.47	2.74	2.86	2.82
Denmark	.96	1.02	1.22	1.33
Other	1.01	1.04	.92	.96
All countries	1.23	1.30	1.29	1.26

Exports of packaged smoking tobacco totaled 1,402,000 pounds in 1967, valued at \$2,144,000. The quantity was up 51 percent from 1966 and was the second largest since 1947. The value of 1967 exports was up 53 percent from the previous year. There were big percentage increases in quantities exported to Japan, Panama, Iceland, Denmark, the Netherlands, Austria, and Italy, and a moderate increase in those to Australia. Exports to Canada--a major market for U.S. smoking tobacco--fell about a sixth, and those to West Germany dropped about a fourth.

Smoking Tobacco in Bulk for Export

The smoking tobacco in bulk export category includes specially prepared tobacco, cut or granulated tobacco, partially processed blended tobacco, and shredded tobacco (see table 8, last column). It also includes processed sheet tobacco and "blended strips" or stemmed tobacco consisting of more than one kind--principally blended flue-cured and burley.

Exports of smoking tobacco in bulk, which have been trending upwards, reached a record 15.9 million pounds in 1967, valued at \$16.2 million. The quantity was up 7 percent and the value was about 8

percent above 1966. The top 5 markets and quantities taken were Peru, 3.1 million pounds; Dominican Republic, Italy, and Spain, about 1½ million pounds each; and the Netherlands, 1.2 million pounds; exports to Spain and the Netherlands were smaller than in 1966, while the others registered gains. Other sizable markets that increased their takings included Bolivia, Ecuador, and Switzerland; those reducing their takings included Finland and Haiti.

Chewing Tobacco

U.S. production of chewing tobacco totaled about 64½ million pounds in 1967, 1 percent below the preceding year. Production of scrap and plug chewing--the principal categories--declined 1 and 2½ percent, respectively. Output of twist was down some, but production of fine-cut continued to gain.

Total output of chewing tobacco has fluctuated within a relatively narrow range during the past 8 years. However, there have been changes in the individual categories. Compared with 1960, last year's production of plug was down about a tenth, output of twist fell a fourth, whereas production of scrap and fine-cut was 6 and 32 percent higher, respectively.

Most of the U.S. chewing tobacco output is consumed domestically. Manufacturers' domestic sales of chewing tobacco in 1967 were about equal to those in 1966, with gains in scrap and fine-cut about offsetting reductions in plug and twist. Manufacturers of scrap chewing apparently dipped into their inventories, since sales in 1967 exceeded output by a small margin. The 1967 U.S. consumption of chewing tobacco per adult male was slightly below that of 1966, but about a fifth less than 10 years ago. (See table 7.)

Table 10.--Chewing tobacco and snuff: Output by category for specified periods

1967 <u>1/</u>	23.7	2.6	4.1	34.0	64.4	29.3	

1/ Subject to revision.

Compiled from reports of the Internal Revenue Service and Consumer and Marketing Service, USDA.

U.S. chewing tobacco exports--mainly twist and plug--totaled 318,000 pounds in 1967. This was 38 percent below 1966 exports, which had been the largest since 1962. Value of exports was \$331,000--a drop of 41 percent from 1966. Australia--the leading U.S. outlet in 1966--slashed its 1967 takings by 73 percent. Exports to Panama rose appreciably, and some also was consigned to French Pacific Islands, Canada, Trust Territory of the Pacific Islands, Dominican Republic, and Netherlands Antilles.

Snuff

U.S. snuff production in 1967, at 29.3 million pounds, was slightly below the previous year's level. In contrast to a relatively stable level for many years, snuff output has trended downwards since 1956. However, the decline in both 1966 and 1967 was more gradual than in most previous years. Snuff production is expected to continue to edge downwards.

Virtually all U.S. snuff output is consumed in this country. Adult per capita consumption in 1967 was near the 1966 level, but 28 percent less than 10 years ago. (See table 7.)

EXPORTS OF UNMANUFACTURED TOBACCO FROM THE UNITED STATES ^{1/}

Exports of unmanufactured tobacco in 1967 totaled 572 million pounds (equivalent to 642 million, farm-sales weight)--the largest since 1946 and 4 percent above 1966. The value of 1967 exports reached an all-time high of \$499 million--also 4 percent above the previous year. Stimulating U.S. exports have been sanctions against Rhodesian tobacco, improved quality of recent flue-cured crops, and the export payment program. During 1956-65, annual exports averaged 491 million pounds and were valued at \$374 million.

Flue-cured made up 75 percent of total 1967 unmanufactured tobacco exports; burley, 8 percent; and fire-cured, 5 percent.

Exports of flue-cured gained 1 percent. Larger quantities than the year before went to the United Kingdom, West Germany, the Netherlands, Thailand, Ireland, South Vietnam, and Switzerland. Reduced shipments went to Japan, Sweden, Australia, and Denmark, while those to Belgium were nearly the same as in 1966.

Burley exports in 1967 were about 1 percent above a year earlier, but 13 percent below the 1964 record. Exports to Thailand, Portugal, the Netherlands, Italy, Denmark, and Chile increased. Less burley than in 1966 went to West Germany, Sweden, Switzerland, and Australia. Exports to Mexico were negligible, in contrast to nearly 2½ million pounds in 1966.

Exports of Maryland tobacco jumped 42 percent. Swiss takings rose 45 percent and considerably more than the previous year also went to West Germany, Belgium, and Portugal. Takings by Spain and the Netherlands declined. Fire- and sun-cured exports gained 12 percent, and there also were gains in dark air-cured types and Black Fat. Exports of cigar wrapper, binder, and filler declined.

The United Kingdom--long the principal overseas market for U.S. leaf--boosted takings 6 percent, and accounted for nearly a fourth of total exports. West Germany--the second ranking U.S. market--increased takings a sixth to the highest on record. The Netherlands--ranking third--also took a record quantity, but Japan--ranking fourth--cut its takings sharply from the 1966 peak. Thailand--the fifth ranking U.S. market--further increased its takings in 1967. Other markets taking more U.S. tobacco than the year before included Switzerland, Ireland, South Vietnam, Italy, Malaysia, Hong Kong, and Finland. Less tobacco went to Sweden, Denmark, Norway, New Zealand, and Spain.

^{1/} Quantities of tobacco in this section are stated in terms of export weight, which is less than the equivalent farm-sales weight.

1/ Preliminary. 2/ Malaysia and Singapore.

Compiled from publications and records of the Bureau of the Census.

In 1967, about 17½ million pounds of tobacco--valued at \$15 million--were exported for foreign currencies under Title I, P.L. 480. This was the smallest quantity since inception of the program--33 percent below the preceding year. A major objective of the present P.L. 480 is to speed up the transition from foreign currency sales to dollar sales, the change-over aided by availability of long-term credits. About three-fourths of 1967 Title I exports for foreign currencies, or 12.8 million pounds, went to South Vietnam. Other destinations and quantities (million pounds) were: Ghana, 1.3; India, 1.2; Israel, 0.2; and Pakistan, 2.0.

Title III, P.L. 480, authorizes barter of agricultural commodities for materials and services from abroad. In 1967, tobacco barter exports reached a new high at 91 million pounds, 6 percent more than the previous calendar year record set in 1966. About three-fourths of barter exports went to Western Europe, one-sixth went to the Far East and Pacific countries, and the remainder to other areas. The 12 leading countries and the quantity shipped to each were:

<u>Country</u>	<u>Mil. lb.</u>	<u>Country</u>	<u>Mil. lb.</u>
United Kingdom	24.2	Spain	4.6
West Germany	18.1	Singapore	3.1
Malaysia	6.8	Japan	2.9
Portugal	5.2	Netherlands	2.9
Ireland	5.0	Peru	2.6
Finland	4.7	Taiwan	2.2

Sales for long-term dollar credit under Title I (formerly under Title IV of P.L. 480) totaled 5.9 million pounds in 1967, substantially above the preceding year. Congo (Kinshasa) received the bulk of these exports; the remainder went to Ecuador, Iceland, and the Philippine Republic.

The Agricultural Trade Development and Assistance Act (Public Law 480) expires December 31, 1968. In his Farm Message to Congress, the President recommended a 3-year extension. Bills to extend this authority have been introduced in Congress.

Combined exports of tobacco under P.L. 480 programs totaled nearly 115 million pounds--one-fifth of all unmanufactured tobacco exports. About 2-1/2 million pounds were exported in 1967 under Agency for International Development (AID) programs. Tunisia accounted for one-half of these AID exports and the rest went to Chile, Trinidad, and the Dominican Republic. Including AID shipments, a total of over 117 million pounds were exported under specified Government programs, about equal to last year's record. Programs accounted for over 20 percent of all unmanufactured tobacco exports, compared with about 21 percent in 1966.

In the year ending June 30, 1968, U.S. exports of unmanufactured tobacco may total around 575 million pounds--about 8 percent below the 47-year high of 1966/67, but otherwise the largest since 1955/56.

Major Foreign Countries Exporting Tobacco

No official information is available on the size of Rhodesia's flue-cured crop for harvest in early 1968. The production goal had been set at 132 million pounds, nearly one-third less than in 1967. Growers have been guaranteed an average return equivalent to about 33 U.S. cents a pound. Auction sales of the crop harvested in early 1968 reportedly begin in April. A large unsold carryover--estimated at around 250 million pounds--has accumulated from previous years. The production goal for the crop to be harvested in early 1969 has been announced at 132 million pounds--unchanged from the previous year's target. The price support level has been lowered to the equivalent of 26 cents per pound--7 cents less than for the current crop.

In Zambia, which plans to expand its production, the 1968 flue-cured crop target is 15 million pounds--up from 11 million harvested last year. In 1964, a record 24 million pounds were produced. Targets of 25 or 30 million pounds have been suggested for 1970. The Government

^{1/} Preliminary. Total unmanufactured tobacco exports include CCC credit sales (credits for relatively short periods); these sales were (million pounds): 1963, 1.0; 1965; 0.3; 1966, 15.8; 1967, 10.8.

MARCH 1968

has an apprentice training program, barn subsidies, and income tax concessions for machinery and buildings. New legislation, enacted in December, establishes a tobacco board and authorizes extensive regulation of production, marketing, and foreign trade.

Canada's 1967 flue-cured crop was an estimated 222 million pounds, 1 percent below the previous year's record. Auction sales in Ontario (underway since November 9) totaled 184 million pounds through March 15, averaging 70 Canadian (about 65 U.S.) cents per pound. Sales in the previous season totaled 215 million pounds, averaging a record 71.4 Canadian (about 66 U.S.) cents. No minimum grade prices nor Government price support apply to the 1967 crop.

In January-September 1967, Canada exported 37 million pounds of flue-cured tobacco--about one-sixth more than a year earlier. About 87 percent was consigned to the United Kingdom. The export gain reflects the larger 1966 crop and sanctions against Rhodesian tobacco.

India's 1967 flue-cured crop, placed at 200 million pounds, was 12 percent above a year earlier. Flue-cured exports in January-October 1967 were 91 million pounds--substantially above a year earlier. The gain resulted from larger exportable supplies. The United Kingdom, which accounted for one-half of the total, increased its takings. Indian exports to the Soviet Union, other Eastern Europe countries, and Japan were up from year-earlier levels. A significant quantity was exported to Egypt, in contrast with a negligible quantity last year.

Oriental tobacco production in Turkey has been estimated at 364 million pounds in 1967--about the same as 1966. Exports in January-November 1967 were 161 million pounds--13 percent above a year earlier. The United States accounted for nearly two-thirds of the total, boosting takings 21 percent. Soviet bloc countries and Japan also took larger consignments. Shipments to the European Economic Community (EEC), particularly West Germany, dropped sharply from the high 1966 level.

The 1967 production of oriental tobacco in Greece was an estimated 227 million pounds, 12 percent above the reduced 1966 crop, but one-fifth below the 1965 record. Unmanufactured tobacco exports in 1967 (from prior crops) totaled 178 million pounds, 0.4 million below the 1966 record. Of the total, 28 percent was consigned to the United States. Shipments to the United States rose 22 million pounds, or 44 percent. Exports to the Soviet bloc declined. Shipments to the European Economic Community dropped one-fourth, with West Germany accounting for all the decline.

British Tobacco Situation

Imports of unmanufactured tobacco into the United Kingdom in 1967 totaled 280 million pounds--7 percent more than the relatively low level of 1966. Cessation of tobacco imports from Rhodesia was partly made up by more tobacco from India and Canada, the other chief Commonwealth sources. Receipts from the United States in 1967 were maintained at 133 million pounds. The proportion of total imports provided by the United States declined to 47 percent from nearly 51 percent in 1966, because imports from other countries gained.

As usual, flue-cured tobacco made up over nine-tenths of total 1967 British tobacco imports. Here are some details on flue-cured imports:

<u>Source</u>	<u>Quantity Mil. lb.</u>	<u>Percentage stemmed of total percent</u>
United States	131	93
India	52	100
Canada	45	89
Zambia and Malawi	9	89
South Africa	10	24
Other countries	<u>17</u>	<u>56</u>
All countries	264	89

On March 20, the United Kingdom increased customs duties on imported tobacco 5 percent, or the equivalent of 52 cents per pound. The increased duty on unmanufactured tobacco (containing 10 percent or more moisture) results in a full rate (applicable to non-Commonwealth countries) equivalent to \$11.00 $\frac{1}{2}$ a pound and a Commonwealth preference rate equivalent to \$10.82. (Conversion to U. S. currency equivalents made at the rate of 1 pound sterling equals \$2.40.)

The latest increase in duty rates follows a 13 percent rise in April 1965, and is the eighth increase since the end of World War II. Duties account for approximately 80 percent of the retail price of popular brands of cigarettes.

The increase in duty rates means a price rise for most cigarettes equivalent to 2 cents per pack of 20. Cigarettes costing about 60 cents a pack would cost 62 cents. The duty changes are expected to provide additional impetus to sales of filter-tipped cigarettes, which in Britain are cheaper than untipped cigarettes. This would further limit the use of tobacco in cigarette manufacture.

The 1967 gross clearances of tobacco from bond in the United Kingdom--an approximate measure of home use and exports combined--increased 1 percent over 1966. Both categories gained slightly. The 1967 gross clearances of flue-cured were:

<u>Source</u>	<u>Quantity Mil. lb.</u>	<u>Change from 1966 Mil. lb.</u>
United States	135.0	+12.2
Rhodesia	48.2	-30.8
Canada	47.9	+ 8.3
India	40.1	+ 1.8
Other countries	<u>16.7</u>	<u>+11.1</u>
Total	287.9	+ 2.6

Net clearances of tobacco from bond (the measure of home consumption), totaled 240 million pounds. They were up 1 percent from 1966, but still 8 percent below the 1960 peak. Contributing to the lower

level in these clearances in recent years have been the sharply higher proportion in stemmed form (providing more usable leaf from the same weight of tobacco) and the growth in filter tip cigarettes (which generally use less tobacco per unit than nonfilter tips). The number of cigarettes sold in 1967--a record 119 billion--was 1 percent above 1966. The tobacco weight of 1967 cigarette sales, however, was 1 percent below 1966. Filter tip cigarettes comprised nearly 66 percent of total 1967 sales, compared with 61 percent in 1966 and 53 percent in 1965. Cigarettes account for 87 percent of total tobacco consumption in the United Kingdom. Sales of smoking tobacco, accounting for most of the rest, were the same as in 1966.

U. K. exports of cigarettes in 1967 were the highest in 9 years, rising nearly 6 percent above 1966. Among markets increasing their takings were Kuwait, Persian Gulf States, Singapore, Hong Kong, and French Somaliland. Those taking less included Aden, France, West Germany, and Sudan.

Stocks of unmanufactured tobacco in the United Kingdom on December 31, 1967, at 435 million pounds, were 6 percent below a year earlier. Year-end holdings represented about 17 months' use (as measured by gross clearances), compared with 18 $\frac{1}{2}$ in 1966 and the 1961-65 average of 21.

Included in the 1967 year-end stocks were 219 million pounds of U. S. flue-cured tobacco--virtually unchanged from a year earlier. Considered in relation to 1967 usings of U. S. flue-cured, these stocks represented about 19 $\frac{1}{2}$ months' use, compared with 21 $\frac{1}{2}$ in 1966 and the 1961-65 average of about 22. Stocks of Rhodesian flue-cured on December 31, 1967, were down to 37 million pounds, compared with 86 million a year earlier and 152 $\frac{1}{2}$ million 2 years earlier. December 31, 1967, stocks of Canadian flue-cured, at 49 million pounds, were only slightly below the year-earlier level; but those of Indian, at 55 million, rose 10 million pounds. Holdings of dark fire-cured from Malawi and air- and sun-cured from India and

^{1/} Imports from Rhodesia amounted to 81.7 million pounds in 1965; 15.2 million in 1966; zero in 1967. ^{2/} Preliminary. Basic data compiled from official United Kingdom sources.

Malawi were also below year-earlier levels.

UNITED STATES IMPORTS AND STOCKS OF
FOREIGN-GROWN TOBACCO 2/

In 1967, imports for consumption of foreign-grown tobacco reached a record high of 197 million pounds--10 percent above the previous year. The value was about \$129 million (excluding import duties)--up about 2 percent. The smaller relative increase in value compared with that in quantity was mainly due to a lower average value of cigarette leaf imports.

The 1967 imports of cigarette leaf for consumption (direct entries plus withdrawals from bond) increased a tenth, exceeding any previous year. Of the major suppliers, percentage gains were greatest for Turkey and Yugoslavia; imports from Greece were up a little.

General imports (total arrivals) of cigarette tobacco (direct entries plus that placed in bond) rose 16 percent above 1966 to the highest on record. (See table 16.) On January 1, 1968, U. S. stocks of foreign-grown cigarette and smoking tobacco were largest for that date on record. Their farm-sales weight equivalent was 403 million pounds--23 percent above a year earlier.

Average values per pound of U. S. imports of cigarette leaf during 1957-67 (imports for consumption and general imports) are shown in table 17.

The 1967 imports of scrap (small pieces of leaves used principally for cigars) for consumption increased 7 percent. Compared with the year before, there were increased imports from the Dominican Republic, Paraguay, Indonesia, and Argentina, but small to moderate reductions in imports from the Philippine Republic, Colombia, and Brazil.

Total arrivals (general imports) of cigar tobacco in 1967 were about a fifth above the previous year but still substantially below the relatively high levels of 1964 and 1965. (See table 16.)

January 1, 1968, stocks of foreign-grown cigar tobacco, by country of origin, are shown on page 42.

OUTLOOK AND SITUATION FOR TOBACCO LEAF

Flue-cured, Types 11-14

Prices and Price Support

✓ The 1968 crop will be supported at 61.6 cents per pound--1.7 cents higher than for 1967. The increase in the overall support level for 1968 is based on a comparison of the parity index in 1965-67 with its 1959 level. This index--a measure of prices paid by farmers--averaged 11 percent higher in 1965-67 than in 1959. Accordingly, as specified by law, the support level for the 1968 tobacco crop was increased 11 percent from the 1959 level. The 1968 support level is about 3 percent above the 1967 level. The yearly increase was 2 percent in both 1966 and 1967, and 1 percent in 1962-65.

The 1967 season average price received by growers of flue-cured tobacco was 64.4 cents a pound--2.5 cents below the 1966 record. The 1967 crop was larger and quality was generally not as good as in 1966. However, quality improved in the Old Belt (type 11-a), where auction prices averaged only $\frac{1}{2}$ cent below last year. In the Middle Belt (type 11-b) and Old Belt (type 11-a)--the last to commence marketing--prices averaged below the average for all belts.

About 72 percent of total gross sales were sold in untied form in 1967, compared with 44 percent in 1966 and 24 percent in 1965. In 1967, the percentages of each type's gross sales consisting of untied tobacco were: type 11-a, 65 percent; type 11-b, 69 percent; type 12, 62 percent; type 13, 72 percent; and type 14, 100 percent. In type 14 markets, the first to open, all tobacco has always

2/ Imports of tobacco are on a declared-weight basis and stocks are on a farm-sales weight basis.

^{1/} Imports for consumption consist of direct entries plus quantities withdrawn from bonded storage. Imports for consumption are usually taken as a measure of manufacturers' use. General imports consist of direct entries plus quantities placed in bonded storage. ^{2/} Average values per pound of imports for consumption exclude the import duty, which amounted to 12-3/4 cents per pound during most of the period shown. For changes in the import duty under the "Kennedy Round" trade negotiations, see the September 1967 Tobacco Situation, page 29.

1/ Quotas based on acreage allotments unless otherwise specified. 2/ A majority of two-thirds or more of farmers voting is required for marketing quotas to become effective under the acreage allotment program or acreage-poundage program. 3/ Probable month, but referendums can occur earlier if warranted by pertinent considerations. 4/ Unless at least a fourth of the growers petition the Secretary in the interim.

been marketed untied with price support for the whole marketing period. In types 13, 12, 11-b, and 11-a markets, untied tobacco in 1967 received price support for the first 95 hours of their respective marketing periods--each type's markets starting on successively later dates. Season prices paid for untied tobacco averaged 1.2 cents per pound higher than for tied tobacco. Price support rates were 3 cents per pound lower for untied tobacco than for matching grades of tied tobacco. The tied-untied price difference ranged from about 1 cent higher in the type 11-a, 11-b, and 12 Belts to 5 cents lower in the type 13 Belt.

With less time required for preparing tobacco for marketing in untied form, farmers sought to market their crop earlier than usual and the redrying capacity was exceeded during much of the season. This necessitated long waits by farmers at markets, reduced selling time, and sales holidays.

Growers placed 282 million pounds--about 22 percent of the crop--under Government loan during the 1967 marketing season. This is substantially above placements in 1965 and 1966, and fourth largest from any crop. In the 12 months ended February 28, 1968, 159 million pounds were sold from Government loan stocks, compared with 240 million a year earlier. Unsold loan stocks on hand March 1, 1968, totaled 791 million pounds--up 18 percent from a year earlier.

Supplies

The 1968 national quota announced July 18, 1967, is essentially the same as in 1967, but poundage allocations (reflecting last year's net overmarketings) will result in a smaller crop in 1968 than in 1967. Overmarketings in 1967 exceeded undermarketings by about 35 to 40 million pounds.

According to the March 1 intentions 555,020 acres will be grown this year--11 percent less than in 1967 and lowest on record. In 1967, marketing quotas and

matching acreage allotments for many flue-cured farms had been increased because of undermarketings in the previous year. An average yield per acre--which takes into account a modified trend due to the restraints of farm poundage quotas--on the intended acreage indicates a 1968 production of about 1,082 million pounds. A crop this size would be about 15 percent below 1967 (when many growers made up their previous undermarketings) and 2 percent below 1966.

Carryover of flue-cured tobacco in the hands of manufacturers and dealers (including the grower cooperative) in mid-1968 is expected to be around 2,290 million pounds--slightly more than a year earlier. An additional estimated 17 million pounds from the 1967 crop is being held by farmers for sale in the 1968 season. If 1968 production should equal 1,082 million pounds, the 1968/69 total supply (including farm carryover) would approximate 3,390 million pounds--about 150 million below 1967/68.

Domestic Use and Exports

During the first half (July-December 1967) of the 1967/68 marketing year, domestic disappearance of flue-cured was a little larger than in the like period of 1966/67. For the 1967/68 marketing year as a whole, domestic use of flue-cured tobacco may show some increase over the unusually low figure calculated for 1966/67. U. S. output of cigarettes (the principal outlet for flue-cured) during the year ending June 30, 1968, may be a little larger than a year earlier. In July-December 1967, it was 1 percent higher than in the comparable period of 1966.

Flue-cured use in recent years has not gained commensurately with increased cigarette output. This has been largely due to: (1) economies achieved by use of reconstituted sheet tobacco and stems (midribs), and other manufacturing efficiencies; (2) the trend towards filter tip brands, most of which (until the advent of 100 millimeter lengths) had a shorter tobacco column than most nonfilter tip

Table 19.--Flue-cured tobacco, types 11-14: Domestic supplies, disappearance, season average price, and price support operations for specified periods

1968		61.6				
Total			2,277.2		790.9	

^{1/} Year beginning July 1. ^{2/} Subject to revision. ^{3/} Through 1959--90 percent of parity price; 1960 set at 1959 level; from 1961 on, adjusted to reflect relative change between 1959 parity index and average of parity index for 3 most recent calendar years. ^{4/} As reported by Flue-cured Tobacco Cooperative Stabilization Corp.; the unstemmed loan stocks on the packed-weight basis average about 11 percent less than their farm-sales weight figures.

brands; and (3) increased use of imported cigarette tobacco. Use of imported cigarette tobacco rose 11 million pounds (farm-sales weight equivalent) in the year ended June 30, 1967. ✓ Marketable quantities would then be prorated among individual marketing district growers according to current poundage allotments.

Exports of flue-cured tobacco in the year ending June 30, 1968, seem likely to range between 525 and 535 million pounds (farm-sales weight)--approximately 50 to 60 million pounds less than the 1966/67 high. This would be the fourth largest on record. The sanctions against Rhodesian tobacco, the export payment program, and the improved quality of recent crops are principal factors contributing to the high level of flue-cured exports.

In administering marketing orders and agreements, authorized by the Agricultural Marketing Agreement Act of 1937, the Secretary of Agriculture is required to consider testimony presented at a hearing, issue a recommended decision, and allow interested persons an opportunity to file exceptions. If the Secretary recommends an order, USDA would conduct a farmer referendum. A two-thirds favorable majority would be required for the Secretary to issue the order.

Burley, Type 31

During July 1967 - January 1968, flue-cured exports were 15 percent below those in the same period a year earlier. Shipments to the United Kingdom declined 10 percent. Among the other leading export destinations West Germany, Japan, Sweden, Denmark, Belgium, Ireland, and Australia took smaller quantities for the July-January period than a year earlier, while the Netherlands and Thailand increased their takings.

Prices and Price Support

Auction prices for the 1967 burley crop averaged 71.7 cents a pound--a record level. This was nearly 5 cents above both 1966 and 1967. Markets opened November 28, and the season ended February 15, at Lexington, Ky. Gross volume sold was 10 percent below the previous year. About 82 percent of estimated producers' sales were made by December 20, when markets closed for the holidays. The year before, 63 percent of the crop had been sold by the holiday shutdown.

USDA Holds Marketing Order Hearing

Farmer groups concerned about market congestion, particularly during the 1967 selling season, have proposed a federal marketing order to regulate the marketing of flue-cured tobacco. The proposed order was considered at a public hearing at 6 locations beginning February 26 at Greenville, N. C. and ending March 8 at Florence, S. C. The proposed order would regulate the movement of tobacco from farms to warehouse. An Administrative Committee elected by growers or nominated by organizations and 5 marketing districts (corresponding to the type producing areas) would be established to administer the order. Under terms of the order, the Administrative Committee would determine the salable quantity from all districts for each week. Then the Committee would recommend weekly marketable quantities of tobacco for each district. Committee recommendations would have to be approved by the Secretary of Agriculture.

Overall quality of 1967-crop marketings was one of the best on record. Prices in all grades were up, mainly by 1 to 6 cents a pound. Price spreads between the C4F grade (one of the major cigarette grades) and some representative medium- and heavy-bodies grades were the smallest in several years. (See table 20.)

The Government support level for the 1967 crop was 61.8 cents a pound. Growers placed 63.8 million pounds under loan, equal to 12 percent of estimated producers' sales. This was a little larger quantity and percentage than in the previous season, but sharply below 1963 and 1964. As of February 29, 1968, Government loan stocks of burley amounted to 338 million pounds (farm-sales weight), compared with 311 million a year earlier and 294 million 2 years earlier. About 8

1965	73	1	6	5	8	13	15	28
1966	74	1	6	4	9	13	13	25
1967	75	0	3	4	7	8	9	14

million pounds of the February 1968 holdings have been sold.

In a mail ballot referendum during February 26-March 1, 1968, 97 percent of the burley growers voting approved marketing quotas (on an acreage allotment basis) for the 1968, 1969, and 1970 crops. Approval by at least two-thirds of those voting was required to continue quotas in effect. Acreage-poundage quotas were disapproved in referendums held in 1966 and 1967.

The price support level for the 1968 burley crop will be 63.5 cents a pound--1.7 cents or about 3 percent above the average level for the 1967 crop.

Supplies

The 1967/68 total supply of burley is estimated at 3 percent below a year earlier and about 5½ percent below the peak 3

years earlier. Carryover was down some from the previous year, and producers' sales declined below those in the 1966 season to the smallest in 7 years.

Farmers' March 1 intentions indicated that 238,200 acres of burley would be grown in 1968--virtually the same as harvested in 1967. Allotments for most farms are the same as in 1967. Based on an average yield with an allowance for trend, the 1968 burley crop would be 590 million pounds, about 9 percent larger than 1967 marketings. The 1967 average yield per acre fell below the previous year's high. Carryover of burley on October 1, 1968, is estimated around 1,310 million pounds--about 70 million less than last October 1. If the crop should turn out near 590 million pounds, total 1968/69 supplies--production plus the indicated carryover--would be around 1,900 million pounds, 1 percent less than for the current marketing year.

^{1/} Year beginning October 1. ^{2/} Subject to revision. ^{3/} Through 1959--90 percent of parity price; 1960 set at 1959 level; from 1961 on, adjusted to reflect relative change between 1959 parity index and average of parity index for 3 most recent calendar years. ^{4/} Actual loan stocks on a packed-weight basis average about 11 percent less than these farm-sales weight figures. ^{5/} About 8 million pounds of these holdings have been sold. * Indicated by sales data.

Domestic Use and Exports

Domestic use of burley in 1966/67 declined 1 percent from 1965/66. In 1967/68, domestic use may increase some from 1966/67.

Burley exports in 1966/67 were about equal to those of a year earlier. In the first 4 months of the current marketing year (October 1967-January 1968), burley exports (farm-sales weight) were 15 percent below a year earlier. Exports to West Germany (the leading outlet) fell 43 percent. Also, among the 9 other leading export destinations Switzerland, Thailand, Denmark, Finland, and Chile took less than a year earlier. Italy, Sweden, Portugal, and the Netherlands were higher. Non-U.S. burley production in 1967 gained 49 million pounds, or about one-fourth over 1966. Much of this gain is available for export.

Maryland, Type 32 3/

Prices and Price Support

Auctions for the 1967 Maryland crop are scheduled to open April 16 and continue through June 28. Sales will also be held at the Baltimore hogshead market, where approximately an eighth of the crop has been sold in recent years.

The 1967 crop will not receive Government price support, since growers disapproved a marketing quota for this crop, as they had done for the 1966 crop. Nor will the 1968 crop of Maryland tobacco be price-supported when it goes to market mostly in 1969, since growers again disapproved marketing quotas in a mail ballot referendum conducted February 19-23, 1968. About 56 percent of the growers voting approved marketing quotas--short of the two-thirds majority required to place marketing quotas into effect. Maryland growers have disapproved marketing quotas in referendums held in 3 successive years, and by law marketing quotas on this type cannot be proclaimed to apply before 1971 unless one-fourth or more of the growers petition the Secretary of Agriculture.

The average price for the 1966 crop (marketed mostly in 1967) was 49.0 cents a pound--25 percent below the preceding season's record average. General quality of the crop was adversely affected by dry weather.

Supplies

The 1967/68 supply of Maryland tobacco is 1 percent below a year earlier and about 3 percent below the peak 2 years earlier. A decrease in the January 1, 1968, carryover, compared with a year ago, more than offset an estimated moderate increase in the 1967 crop.

Based on farmers' intentions as of March 1, about 33,000 acres will be grown this year--about the same as in 1967.

Based on an average yield with allowance for trend, about 38.8 million pounds would be produced from the 1968 intended acreage--2 percent above the estimated 1967 outturn. Carryover next January 1 may approximate 86 million pounds--about the same as last January 1. The 1968/69 total supply--production plus carryover--is indicated at about 125 million pounds--slightly above the previous year.

Domestic Use and Exports

Domestic use of Maryland tobacco in 1966/67 declined 5 percent below the relatively high 1965/66 level and about equaled use in 1964/65. Domestic use in recent years has been at a higher level than during the 1961-63 marketing years, when such use declined steadily.

3/ For marketing quota purposes, the carryover and total supply of Maryland tobacco are calculated as of the January 1 falling within the marketing year, October 1 through September 30. Disappearance is calculated on the October-September basis.

1967	No price support	^{6/}		Auctions scheduled to start April 16, 1968		
1968	No price support	^{6/}				
Total	---	38.9	---	18.0		

^{1/} For marketing quota purposes, the carryover and total supply of Maryland tobacco are calculated as of January 1 falling within the marketing year--October 1 through September 30. ^{2/} Year beginning October 1. ^{3/} Subject to revision. ^{4/} Through 1959--90 percent of parity price; 1960 set at 1959 level; from 1961 on, adjusted to reflect relative change between 1959 parity index and average of parity index for 3 most recent calendar years. ^{5/} Actual loan stocks on a packed-weight basis average about 2 percent less than these farm-sales weight figures. ^{6/} Marketing quota not in effect since over one-third of growers voting disapproved.

Exports of Maryland tobacco in 1966/67, at 16½ million pounds farm-sales weight, were the highest in about 40 years. In the current marketing year, however, exports will likely be below this near-record level. During the first third of the current marketing year (October 1967-January 1968), exports were about 32 percent less than a year earlier. Switzerland, the principal outlet as usual, cut takings by about half. None was reported shipped to Portugal, Spain, or South Vietnam; a year earlier, significant quantities had gone to these countries. On the other hand, exports to West Germany and Belgium were up sharply.

Fire-Cured, Types 21-23

Prices and Price Supports

Auctions for Virginia fire-cured, type 21, began December 4 and ended February 15. Volume of sales was the second smallest on record--8 percent below the comparatively small volume of the preceding year. General quality of offerings was lower. The auction average, at 40.9 cents a pound, was slightly below the previous season, but still third highest on record.

Auctions for Kentucky-Tennessee fire-cured, types 22 and 23, began January 18 and 22, respectively, and final sales were made on February 23 for type 23 and March 15 for type 22. Gross sales for type 22 were over a fourth below the preceding season, averaging a record 46.1 cents a pound--10 percent higher than in 1967. Gross sales for type 23 dropped nearly 40 percent to the lowest on record, and averaged 43.5 cents a pound--above any previous year.

The Government price-support level for the 1967 crop of fire-cured was 41.9 cents a pound. During the season just ended, growers of Virginia fire-cured placed about 658,000 pounds under Government loan--6 percent more than in the preceding season. Placements represented about 10 percent of the crop, compared with 8 percent the year before.

Growers of Kentucky-Tennessee, type 22, placed about 760,000 pounds under loan--around 3 percent of total estimated marketings. This was the second lowest quantity and proportion on record. Loan deliveries of type 23 dropped to 63,000 pounds--also near-record low--only 1 percent of net sales. In the previous season, 902,000 pounds--9 percent of net sales--went under loan.

The 1968 crop of fire-cured will receive Government price support at an overall level of 43.1 cents a pound--about 3 percent above the level in effect for the 1967 crop.

Supplies

The 1967/68 supply of Virginia fire-cured is 8 percent below a year earlier, while the supply of the Kentucky-Tennessee types is 11 percent smaller.

According to farmers' intentions as of March 1, about 17,800 acres of Kentucky-Tennessee fire-cured and 5,300 acres of Virginia fire-cured will be grown in 1968. Intended acreage of both kinds are down about 2 percent from last year. Acreage allotments for most farms are about the same as for 1967. If the yield per acre equals the average (with allowance for trend), production of the combined fire-cured types would be close to 40 million pounds--about 9 percent above 1967 crop marketings.

Carryover of fire-cured on October 1, 1968, may be around 90 million pounds--16 million less than last October 1. Such stocks, plus the indicated crop, would provide a total 1968/69 supply of about 130 million pounds--9 percent smaller than for the current year.

Domestic Use and Exports

In 1966/67, domestic use of Kentucky-Tennessee types 22-23 rose about a sixth above the relatively low figure calculated for 1965/66, but domestic use of Virginia type 21 fell nearly a fourth.

^{5/} Less than 50,000 pounds.

* Indicated by sales data.

During the first third of the current marketing year (October 1967-January 1968), exports of Kentucky-Tennessee fire-cured were 31 percent ahead of those a year earlier. The Netherlands, accounting for over half of the total, boosted its takings sharply. Sweden, France, Italy, and West Germany also took more than a year ago, but less went to Switzerland, Belgium, and Denmark. None was reported exported to South Vietnam; a year earlier, a significant quantity had been shipped there.

Exports of Virginia fire-cured in October 1967-January 1968 dropped 44 percent below the relatively large year-earlier figure and were 4 percent below exports 2 years earlier. Norway--the leading outlet--cut its takings 24 percent. West Germany, Sweden, United Kingdom, and Switzerland, also took less than a year earlier. None was reported exported to Austria, whereas a year earlier a significant quantity had been shipped there. New Guinea increased its takings appreciably.

Dark Air-Cured and Sun-Cured, Types 35-37

Prices and Price Supports

Auction markets for type 35 (One Sucker), type 36 (Green River), and type 37 (Virginia sun-cured) opened during the first week of December and closed January 26 for type 37, January 25 for type 36, and February 2 for type 35. Prices for each of the 3 types averaged record high, while volume sold was record or near-record low. Auction sales of type 35 averaged 41.7 cents a pound--11 percent above the previous year; sales volume dropped 38 percent to the lowest on record; quality of offerings was not quite as good as in the preceding season. The auction price of type 36 averaged 37.9 cents a pound--up 4 percent from the previous year. Sales volume was second lowest on record, declining more than a fourth below the previous season; quality of offerings was lower than the year before. For all auction sales of Virginia sun-cured, the price average was 45.2 cents a pound--7 percent above the previous season; poundage

sold fell 14 percent to the second lowest on record; general quality was improved over the 1966 crop. About 13 percent of the Virginia sun-cured volume was sold on the fire-cured markets.

The Government support level for the 1967 crop of dark air-cured and sun-cured was 37.3 cents a pound. In the season recently ended, growers of One Sucker placed about 925,000 pounds under loan--9 percent of marketings. This was the lowest quantity and proportion in 6 years. Type 36 loan placements amounted to 475,000 pounds, or about 12 percent of marketings, the smallest quantity and proportion in 9 years. Loan placements of Virginia sun-cured were small as usual, amounting to around 26,000 pounds, or about 2 percent of the crop.

About 93 percent of the growers of Virginia sun-cured, type 37, voting in a mail ballot referendum during February 26-March 1, 1968, approved marketing quotas for the 1968, 1969, and 1970 crops. Growers of dark air-cured, types 35-36, had approved marketing quotas on their 1967-69 crops in a previous referendum.

The overall Government price support level for the 1968 crops of dark air- and sun-cured will be 38.3 cents a pound--about 3 percent above the support level in effect for the 1967 crop.

Supplies

The 1967/68 combined supply of dark air-cured, at about 81½ million pounds, is down more than 6 million pounds from 1966/67. The supply of dark air-cured is down 7 percent, principally because of a sharp drop in marketings. The supply of Virginia sun-cured is down 5 percent.

According to farmers' intentions on March 1, about 9,900 acres of dark air-cured types 35-36 and 1,100 acres of sun-cured will be grown in 1968. Prospective acreage of types 35-36 is down 3 percent, and that of Virginia sun-cured is down about 8 percent from 1967. For

^{1/} Year beginning October 1.

^{2/} Subject to revision.

^{3/} Through 1957--66-2/3 percent of burley support; 1958-60 legal basis changed; from 1961 on adjusted to reflect relative change between 1959 parity index and average of parity index for 3 most recent years.

* Indicated by sales data.

most farms in 1968, acreage allotments are the same as in 1967. Based on an average yield per acre, with allowance for trend, 1968 production of dark air-cured and sun-cured would be nearly 20 million pounds--about 3 million more than marketings from the 1967 crop.

The combined carryover of dark air- and sun-cured types on October 1, 1968, may approach 60 million pounds--down 5 million from last October 1. The indicated carryover plus this year's crop would result in total 1968/69 supplies approximating 80 million pounds--about 2 to 3 percent less than for the current marketing year.

Domestic Use and Exports

Domestic use of dark air-cured, types 35-36, rose 5 percent in 1966/67 while domestic use of the much smaller-volume Virginia sun-cured type 37 dropped nearly 30 percent below the level of a year earlier. Output of plug, twist, and fine-cut chewing tobaccos--the chief outlet for dark air-cured in this country--declined 1½ percent below a year earlier. In October-December 1967 (first quarter of the current marketing year), it continued about 1½ percent less than a year earlier.

In the first 4 months of the current marketing year (October 1967-January 1968) exports of One Sucker leaf dropped 50 percent below a year earlier. Takings by Belgium dropped an eighth, while none was exported to South Vietnam (in contrast to a significant quantity in the corresponding period a year ago). Exports of Green River rose a fifth, mainly due to increased shipments to Australia and Belgium. Consignments to the United Kingdom declined 10 percent.

A large part of U.S. exports of dark air-cured tobacco is made in the form of Black Fat--a semiprocessed product. In Oct. 1967-Jan. 1968, these exports were 16 percent larger than a year earlier. Shipments to Togo, Cameroon, and Spanish Africa rose sharply, while less than a year earlier was exported to Nigeria, Ghana, and West Africa.

Cigar Tobacco, Domestic and Imported
Prices and Price Supports

Overall price support levels for the eligible kinds of cigar tobacco, in 1968 and recent years are:

	<u>1965</u>	<u>1966</u>	<u>1967</u>	<u>1968</u>
	- - - <u>Cents per pound</u> - - -			
Puerto Rican (type 46)	30.9	31.5	32.1	33.0
Conn. Valley (types 51-52)	41.2	42.0	42.8	44.0
Ohio-Wis. (types 42-44 and 54-55)	29.7	30.3	30.9	31.7

Government price support is not in effect for Pennsylvania tobacco (type 41), since growers disapproved marketing quotas in a recent referendum. (See page 26 for referendum results.) Connecticut Valley and Georgia-Florida shade-grown cigar wrapper (types 61-62) are not included among the types covered by price-support legislation.

For 1967 crop sales through mid-March, the average price of Southern Wisconsin tobacco (type 54) averaged about 34½ cents--slightly higher than for the 1966 crop. Prices of Northern Wisconsin (type 55) averaged about 34½ cents--about 2 cents above the 1966 average.

Official season average prices of the 1967 cigar tobacco crops are scheduled for release May 10.

1968 Cigar Filler and Binder Acreage Allotments

The 1968 acreage allotments for Connecticut Valley types 51-52 and Ohio filler-Wisconsin binder types 42-44 and 54-55 were announced on January 25. The acreage allotment for types 51-52 is 4,218 acres, compared with 4,396 acres for 1967. The

Total	1.7	.1	.7	1.7	.8	7.3	12.3	

1/ Negligible. 2/ Includes negligible amount from the 1962 crop of New York and Pennsylvania Havana Seed (type 53). 3/ Preliminary; subject to revision. 4/ Not yet marketed.

acreage allotment for types 42-44 and 54-55 is 19,435 acres, compared with 19,837 acres in 1967. Allotments were not reduced for farms that had planted at least 75 percent of their allotments during 1 of the preceding 4 years, but were reduced for some farms that substantially decreased the size of plantings during recent years.

Supplies

Filler: The total 1967/68 supply of Pennsylvania filler is the smallest in 9 years--8 percent below 1966/67. According to March 1 grower's intentions, the 1968 acreage would be 5 percent below that harvested in 1967. Based on an average yield adjusted for trend, 1968 production could approximate 39 million pounds --about 3½ million less than 1967.

The 1967/68 supply of Ohio filler is record low--down 14 percent from the previous year. The 1968 prospective acreage is down 9 percent from 1967. Allowing for trends in yields, this year's crop might be around 3-3/4 million pounds--up slightly from 1967, when the average yield per acre dropped sharply below the previous year's record high.

The January 1, 1968, stocks of Puerto Rican tobacco (on the Island and in the U.S.) totaled 37 million pounds--down 23 percent from a year earlier and 34 percent below the high level 2 years earlier. The crop planted in late 1967 for harvest in early 1968 is tentatively estimated at 11½ million pounds--only about a third of the average annual harvest in the 1961-64 period.

Imported Cigar Tobacco:

In 1967, about 52 million pounds (farm-sales weight equivalent) of foreign cigar tobaccos arrived in the United States--about 7 million more than in 1966, but nearly 32 million less than in 1965:

Country of origin	General imports (farm-sales weight equivalent)		
	1965	1966	1967
	Mil.	Mil.	Mil.
	lb.	lb.	lb.
Philippine Rep.	43.3	26.4	18.5

1967 ^{4/}	15.0	50.0	65.0				

^{1/} Year beginning October 1.^{2/} Negligible.^{3/} Breakdown between domestic use and exports not available for individual types of Wisconsin tobacco.^{4/} Subject to revision.

Binder: Total 1967/68 supplies of Connecticut Valley binder types are lowest on record--a sixth below 1966/67. Based on farmers' intentions as of March 1, prospective acreage of Broadleaf is the same as harvested last year, but that of Havana Seed is up 5 percent. Allowing for trend in average yields per acre, 1968 production of the Connecticut Valley binder types may approximate 3 million pounds, a little above 1967.

Total 1967/68 supplies of Wisconsin tobacco are a little below 1966/67, all the decline occurring in the Southern Wisconsin type. The 1968 intended acreage of Southern Wisconsin tobacco is the same as harvested in 1967, while intentions for Northern Wisconsin indicate a decline of 9 percent. Based on average yields adjusted for trend, the 1968 production of the combined types may approximate $14\frac{1}{4}$ million pounds-- $3\frac{3}{4}$ million pounds less than estimated production in 1967.

Wrapper: Total 1967/68 supplies of shade-grown cigar wrapper are down 5 percent, with all the decrease occurring in the Connecticut Valley type. Prospective 1968 acreage is down 1 percent from 1967 in the Connecticut Valley and down 2 percent in Georgia-Florida. Based on average yields adjusted for trend, 1968 production in both areas combined would be 19.8 million pounds--7 percent more than in 1967, when yields per acre averaged the second lowest in 9 years.

Domestic Use and Exports

Filler: Disappearance of U.S. filler types totaled about 86 million pounds in 1966/67--slightly below the previous marketing year. Domestic use (98 percent of total disappearance) was about the same, but exports (accounting for the other 2 percent) were down some. During the first 4 months of the 1967/68 marketing year, exports continued to fall and were 57 percent below those a year earlier. None was reported shipped to South Vietnam, in contrast to a sizable quantity a year earlier, and reduced shipments went to Canada. France took substantially

more than a year earlier.

Imported Tobacco: During October 1967/January 1968, cigar tobacco imported for consumption totaled about 23 million pounds (farm-sales weight equivalent)--nearly a tenth above a year earlier. Imports from the Dominican Republic, Brazil, Colombia, Indonesia, Argentina, and Honduras gained. Reduced imports came from the Philippine Republic, Mexico, Paraguay, and Jamaica. Also, stocks data indicate a continued drop in use of Cuban tobacco.

Binder: Disappearance of Connecticut Valley binder, at 6.8 million pounds in 1966/67, was a new low. Domestic use (about three-fourths of the total) rose moderately, but exports dropped 24 percent. During the first 4 months of 1967/68, exports of Connecticut Valley binder were about double the year-earlier level, due mainly to a big increase in exports to West Germany.

Disappearance of Wisconsin tobacco in 1966/67 fell 8 percent, attributable to a drop in the Northern Wisconsin type. During October 1967-January 1968, exports of Wisconsin tobacco were sharply below those a year ago. The Netherlands cut its takings, and none was reported going to Canada and Belgium.

Wrapper: During July 1966-June 1967 (the designated marketing year for wrapper) disappearance of Connecticut Valley wrapper rose over a tenth above 1965/66, with gains in both domestic use and exports. Disappearance of Georgia-Florida wrapper declined 8 percent to a 6-year low, due to a drop in exports.

During July 1967-January 1968, exports of Connecticut Valley wrapper were 8 percent smaller than a year earlier. Destinations reducing takings included the United Kingdom, Canada, and the Canary Islands. Exports to West Germany gained appreciably. Exports of Georgia-Florida wrapper were more than double the low level of a year earlier. West Germany, Canary Islands, East Germany, Belgium, and the Netherlands, took more, while Canada reduced its takings.

1/ 1967 and 1968 crops respectively. 2/ Prices paid by farmers including interest, taxes and wage rates. 3/ Seasonally adjusted. 4/ Seasonally adjusted, annual rate. 5/ Excise tax excluded. 6/ Federal and applicable state and local taxes included. 7/ Farm-sales weight equivalent. 8/ July 1 for flue-cured and cigar wrapper and October 1 for others. 9/ Holdings of manufacturers and dealers including grower cooperatives. 10/ Reported by grower cooperatives. 11/ Weight of tobacco leaf not including stems added. 12/ Data for most recent quarter are preliminary estimates. * Less than 50,000 pounds. ** Of this quantity, approximately 130 million pounds had been sold.

Index of Special Items, Tables, and Charts in 1967 Issues of the Tobacco Situation

Each issue of the Tobacco Situation carries discussion and standard statistical tables which cover (1) cigarettes, cigars, and other manufactured tobacco products, (2) exports, foreign production and United Kingdom data, (3) imports and (4) each of the different kinds of leaf tobacco. The discussion and regular tables contain current estimates and comparable data for earlier years. Also included in each issue are 6 standard charts that depict recent trends in manufactured tobacco products and leaf tobacco exports. In addition, various issues of the Tobacco Situation contain special items, special-purpose tables and charts; the following index provides references to such material published during calendar year 1967:

<u>Special Items:</u>	<u>1967 Issue</u>
Acreage-poundage program disapproved by burley growers	March
Lease and transfer of acreage allotments	September
Price increases on cigarettes	June
Tobacco tariff changes ("Kennedy Round")	September
Tobacco used in roll-your-own cigarettes	March
 <u>Statistical Tables:</u>	
All tobacco leaf combined: Supply, domestic use, exports, etc.	December
